311. Sparse Matrix Multiplication

Medium 934 328 Add to List Share

Given two sparse matrices `mat1` of size `m x k` and `mat2` of size `k x n`, return the result of `mat1 x mat2`. You may assume that multiplication is always possible.

Example 1:

$$\begin{bmatrix} 1 & 0 & 0 \\ -1 & 0 & 3 \end{bmatrix} \times \begin{bmatrix} 7 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 1 \end{bmatrix} = \begin{bmatrix} 7 & 0 & 0 \\ -7 & 0 & 3 \end{bmatrix}$$

Input: `mat1 = [[1,0,0],[-1,0,3]]`, `mat2 = [[7,0,0],[0,0,0],[0,0,1]]`

Output: `[[7,0,0],[-7,0,3]]`

Example 2:

Input: `mat1 = [[0]]`, `mat2 = [[0]]`

Output: `[[0]]`

Constraints:

- `m == mat1.length`
- `k == mat1[i].length == mat2.length`
- `n == mat2[i].length`
- `1 <= m, n, k <= 100`
- `-100 <= mat1[i][j], mat2[i][j] <= 100`

Your input `[[1,0,0],`
`[-1,0,3]]`

Output `[[7,0,0],`
`[-7,0,3]]`

Expected `[[7,0,0],`
`[-7,0,3]]`
