

[Description](#)[Solution](#)[Discuss \(259\)](#)[Submissions](#)**Example 3:**

Input: root = [3,5,1,6,2,0,8,null,null,7,4], p = 5, q = 10

Output: null

Explanation: Node 10 does not exist in the tree, so return null.

Constraints:

- The number of nodes in the tree is in the range $[1, 10^4]$.
- $-10^9 \leq \text{Node.val} \leq 10^9$
- All `Node.val` are **unique**.
- $p \neq q$

Follow up: Can you find the LCA traversing the tree, without checking nodes existence?
