255. Verify Preorder Sequence in Binary Search Tree

Medium   👍 1027   👎 76   ♡ Add to List   �📋 Share

Given an array of **unique** integers `preorder`, return `true` *if it is the correct preorder traversal sequence of a b* *search tree.*

Example 1:

```
Input: preorder = [5,2,1,3,6]
Output: true
```

Example 2:

```
Input: preorder = [5,2,6,1,3]
Output: false
```

Constraints:

- $1 <= preorder.length <= 10^4$
- $1 <= preorder[i] <= 10^4$
- All the elements of `preorder` are **unique**.
